sabinpyakurel@gmail.com | github.com/proustpunk | linkedin.com/in/sabin-pyakurel | 9748262341

PROFILE

Full-stack engineer specializing in deploying AI features into production systems using Python and modern JavaScript frameworks. Experienced in building resume intelligence systems using NLP embeddings, LLM-powered assessment platforms, and workflow automation. Comfortable shipping end-to-end features from data models and APIs to frontend dashboards. Seeking a role to build and scale LLM-powered applications.

EDUCATION

Bachelor of Computer Engineering | Top academic performance
Tribhuvan University

Final semester pending

Intermediate Education
Pinnacle College

CERTIFICATIONS & BADGES

AWS Knowledge: Serverless | *Amazon Web Services Training Badge*

PROJECTS

AI-Powered Resume Intelligence & RAG System | *Django, Python, NLP, Embeddings*

- Developed LLM-powered resume intelligence system using Word2Vec embeddings for semantic search (80% matching accuracy).
- Implemented GPT-2 perplexity scoring to detect AI-generated or keyword-stuffed resumes automatically.
- Designed RAG-style retrieval pipeline using embeddings and cosine similarity for job-candidate matching across 8 categories.

Proctored Technical Assessment Platform | *Django, Docker, JavaScript*

- Built multi-stage assessment platform (MCQ, coding, subjective) with dynamic question delivery and evaluation pipeline.
- Integrated Flan-T5-large LLM for automated question generation using few-shot prompting with constrained output.
- Implemented identity verification using dlib facial recognition (68-point landmarks, ResNet embeddings).
- Used Docker-based sandboxing to securely execute and evaluate code submissions in isolated environments.

Hiring Automation & Notification Pipeline | *Django, Celery, Redis*

- Built asynchronous workflow system for automated candidate notifications and bulk email processing.
- Used Celery and Redis to offload background jobs, ensuring fast API response times under heavy load.
- Designed token-based email workflow system for automated hiring communication pipelines.

Full-Stack Recruitment Dashboard | *React, Django REST, REST APIs*

- Built React-based dashboard for recruiters to view ranked candidates and manage hiring workflows.
- Integrated Django REST APIs with frontend for real-time data synchronization and status updates.
- Focused on responsive UI design and efficient state management for complex recruitment data.

ADDITIONAL PROJECTS

Unity Game Projects | *Unity, C#*

- Built interactive 2D game systems with UI flow, gameplay loops, and state management.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C#, SQL

Backend / Systems: Django, Django REST Framework, Celery, Redis, Docker, REST API design

Frontend / Full-stack: React, HTML, CSS, JavaScript

GenAI / LLM: Word2Vec, GPT-2, Flan-T5, Transformers, Embeddings, RAG, Prompt Engineering

ML / NLP: TF-IDF, SVM, NLTK, scikit-learn, NumPy, pandas, dlib

Tools & Cloud: Git, GitHub, FFmpeg, AWS (Serverless)
