

MAYA CHEN

maya.chen@email.com | github.com/mayachen | linkedin.com/in/mayachen | (555) 234-5678

PROFILE

Backend engineer with 7+ years of experience architecting distributed systems and high-performance APIs. Expert in Python (FastAPI/Django), Go, and Java with deep knowledge of microservices, event-driven architectures, and cloud infrastructure. Built systems handling millions of daily requests with 99.99% uptime. Strong advocate for clean code, comprehensive testing, and scalable system design.

EDUCATION

Master of Science in Computer Science
Carnegie Mellon University

SKILLS

Languages: Python, Go, Java, TypeScript, SQL, Rust
Frameworks: FastAPI, Django, Spring Boot, Gin, Express.js
Databases: PostgreSQL, MongoDB, Redis, Cassandra, DynamoDB
Messaging: Kafka, RabbitMQ, AWS SQS/SNS, Redis Pub/Sub
Cloud & Infra: AWS (EC2, RDS, Lambda, S3, ECS), Docker, Kubernetes, Terraform
Other: gRPC, GraphQL, OpenAPI, OpenTelemetry, Prometheus, Grafana

EXPERIENCE

Senior Backend Engineer 2021–Present
FinTech Platform New York, NY

- Architected and deployed a high-frequency trading API processing 50,000+ requests/second with sub-10ms latency using Go and Redis.
- Led the migration of a monolith to microservices using Docker and Kubernetes, reducing deployment time from 2 hours to 15 minutes.
- Implemented Kafka-based event streaming for cross-service communication, achieving 99.99% message delivery reliability.
- Built a distributed rate-limiting and caching layer using Redis, reducing database load by 70%.
- Mentored 5 junior engineers through design reviews and pair programming.

Backend Developer 2018–2021
HealthTech Solutions Boston, MA

- Built HIPAA-compliant API services using FastAPI and PostgreSQL, handling 10,000+ patient records daily.
- Designed a notification system processing 1M+ daily events using Celery and Redis with dead-letter queues.
- Implemented OAuth2/OIDC authentication with JWT, integrating with multiple identity providers.
- Reduced API response time by 55% through query optimization and Redis caching.

PROJECTS

Distributed Job Scheduler | *Go, PostgreSQL, Redis, Docker*

- Built a distributed job scheduling system handling 10,000+ concurrent jobs with retry policies and dead-letter queues.
- Reduced job failure rate from 12% to 0.8% through exponential backoff and automatic retries.

Real-Time Analytics Pipeline | *Kafka, Spark, Snowflake, Airflow*

- Designed a data pipeline processing 10TB of event data daily using Kafka and Spark Streaming.
- Reduced query latency from 5 minutes to 2 seconds using Snowflake and materialized views.

CERTIFICATIONS

AWS Certified Solutions Architect – Professional
Certified Kubernetes Administrator (CKA)
Confluent Certified Developer for Apache Kafka
