PROFILE

Python-focused developer working on backend systems and applied machine learning. Uses Django as one backend tool among others to build practical systems with clear data flow, while staying open to other frameworks and stacks. Projects include resume ranking, game development, and media/data preprocessing.

EDUCATION

Bachelor's Degree in Computer Engineering
Tribhuvan University

Final semester result pending

Intermediate Education
Pinnacle College

PROJECTS

Resume Screening & ATS System | *Python, Django, TF-IDF, Word2Vec, Random Forest, cosine similarity*

- Built a resume parsing and candidate ranking system with text preprocessing, feature extraction, similarity scoring, classification, and test-generation logic.
- Used Django as the backend tool to handle the workflow for uploads, processing, and results, while keeping the system modular for other frameworks later.
- Applied TF-IDF, Word2Vec, cosine similarity, and Random Forest to compare resumes against role requirements and rank candidates.

2D Platformer Game | *Unity, C#*

Deployed Build

- Built a playable platformer with movement, collision, level design, and a complete game loop.
- Deployed a playable build and tested the game as a finished user-facing project rather than only as local code.

Location Guessing Game | *Unity, C#*

Interactive Project

- Built an educational map-based game with clickable UI, feedback flow, and child-focused interaction design.
- Focused on interaction structure, usability, and a clean play loop.

Dataset Collection & ML Workflow | *FFmpeg, Python*

Data Processing

- Collected and processed datasets using FFmpeg for media extraction and preprocessing workflows.
- Handled video/audio transformation for structured data preparation.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C#, SQL

Backend / ML: Django, TF-IDF, Word2Vec, Random Forest, cosine similarity, pandas, NumPy

Game Development: Unity, C#

Tools: Git, FFmpeg, GitHub
